

New Features:

Google Drive Integration

You can now connect your Google account to your eChalk account. This allows you to access your Google Drive from anywhere in the application, and bring any file from your Google Drive directly into eChalk. This works anywhere you can use a file in eChalk, for example you can add files to your feed posts, web pages, lessons, assignments and more directly from Google Drive. These files are imported directly into eChalk whenever they are used. Native Google files are converted to Word documents, Excel Sheets or PowerPoint Slides as they are imported.

Major Enhancements

User Bulk Management

A number of changes have been introduced to bulk management to improve usability

- Maximum file size has been changed from 2MB to 10MB
- Progress on file processing is now updated every 15 seconds until complete
- Updates to existing users no longer require the password field – it can be left empty for already created users (new users still require a password)

Export Users

It is now possible to export user information for your users from the User Admin tool. Simply search using any criteria that you choose (all students, pick just particular schools, etc.) and hit the export button. The data is provided in a csv file with fields that are compatible with our bulk upload tool. This should allow for easy changes to users which you can then import via the bulk upload tool.

Bug Fixes

CMS Images	We have corrected a defect that caused the order of images to be lost when adding images to an existing gallery. Now images will be correctly ordered and new images will be added to the end of the gallery.
Brochure Theme	We have corrected an issue in 33% text blocks. Previously this block used a different font size than other blocks in the Brochure theme. This is now handled consistently.
