

Enhancements

Translate Tool for Mobile Views

We have added the translate tool for all mobile versions of your websites. All you need to do is [turn on the translation tool](#) in Manage Website. It will then be available for any platform (Computer, Tablet, Phone, etc) so that your users can always translate into the appropriate language. Previously this was not available on Phones.

Fixes

Feed Archives

There was a rare issue displaying the feed archives when it contained more than one feed and was on a copied page. The feed archive was not available. We have corrected this issue and all feed archives will work.
